

INTRODUCTION

LiveSmart® Technologies is committed to environmental sustainability. For over five years, we have been providing self-sustaining security technologies that harness energy from the sun or wind to power various surveillance devices. Our clients have experienced the effectiveness of our CCTV security systems in safeguarding large perimeters using energy derived from solar panels and/or wind turbines.

SUSTAINABILITY POLICY

OBJECTIVE

To be a benchmark for emerging companies dedicated to the use of clean and/or renewable energies.

SELF-SUSTAINABLE PRODUCT CATALOG

Hybrid Surveillance Pole

Solar Pole

Mobile Surveillance Platform

Our **SOLAR POLES and HYBRID POLES** (solar panel + wind turbine) are steel structures equipped with two solar panels, a panel mounting system, a gel battery bank, and an electrical panel with a solar controller, switch, and wiring.

The **MOBILE SOLAR SURVEILLANCE PLATFORM** ensures security in mobile open spaces, functioning with its own energy transformed through solar panels.

All our self-sustaining solutions can integrate with various IP cameras, PTZ cameras, video analysis software, facial recognition, license plate recognition (LPR), and more.

These systems operate autonomously and wirelessly, resulting in significant cost savings for CCTV security projects, eliminating the need for installing telecommunication antennas, weather laboratories, and more.

SCOPE

All partners, managers, operators, and staff must be familiar with LiveSmart® Technologies' Sustainability Policy.

COMPANY RISKS

Installation of security systems:

Compliance with regulations from the Risk Prevention department is crucial to ensure the safety and health of the operations team during the installation of self-sustaining CCTV security systems on-site.

Increased competition:

Offering improvements to installed security systems to stand out for excellent service and quality in the market's demand.

Employee turnover:

Maintaining growth opportunities and a positive work environment to retain talent within the company. Talent should embody the brand's values and identify with LiveSmart®'s environmentally friendly services and products.

Lack of innovation:

Offering a catalog of distinctive products and services to ensure innovation, keeping customers updated and attracting new clients.

OPERATIONAL IMPACTS

LiveSmart® is recognized as an innovative company that has developed self-sustaining solutions to protect large perimeters using solar and/or wind energy.

Our services primarily cater to **SMALL DISTRIBUTED GENERATION FACILITIES (SDGF)**, such as Solar Plants generating power at a scale of 3 to 9 MW, and **Utility Scale** Parks, involving large-scale projects with substantial investment and energy generation for vast areas requiring surveillance.

All these solar plants require a ROBUST and EFFICIENT Perimeter CCTV Security System, providing security guarantees for investors and insurance companies.

The RISKS of theft and fires are increasing, and LiveSmart®'s self-sustaining solution reduces crime rates and environmental impact.

CONCLUSION

LiveSmart® develops products and offers services that meet security needs while utilizing natural resources for operation, reducing carbon footprint not only in Chile but also globally. Clean and free energy. The company has no environmental fines or sanctions and is not involved in environmental conflicts. Therefore, LiveSmart® is well-positioned in terms of compliance and must maintain good practices to continue respecting current regulations and avoiding environmental conflicts, especially with communities.

QUALITY AND ENVIRONMENT POLICY

LiveSmart® Technologies SpA, a company specializing in providing products and services related to the security of assets and physical integrity for businesses and individuals, as stated in the document signed in Santiago, Chile, on January 23, 2020, with RUT 76.211.143-8, formerly Davantec Technologies Ltda. (12-04-2012). Acknowledging the importance of meeting customer requirements while maintaining continuous respect for the environment, the company has implemented an **Integrated Management System**, confirming its commitment to continuous improvement in quality and environmental matters.

Key Elements of the Quality and Environment Policy, following the objectives set at the inception of **LiveSmart® Technologies SpA**:

1. Offering the most innovative security technologies for various installations: residential, commercial, industrial, educational, large infrastructures, and more.
2. Contributing to a safer world by ensuring material and immaterial protection, guiding the company's actions with the best professionals and suppliers.
3. Achieving complete customer and stakeholder satisfaction by ensuring service quality related to the implementation, installation, configuration, maintenance, and development of security projects with video analysis and home automation, all while respecting the environment.
4. Compliance with current legislation on Quality and Environment, as well as other requirements the organization subscribes to, ensuring these specifications are met through direct contact.
5. Utilizing equipment and resources, as well as providing environmentally friendly materials, to facilitate surveillance and detection of unwanted intrusions in specific spaces.
6. Advising clients on the most appropriate security measures at all times.
7. Conducting periodic evaluations of the environmental impacts of activities, with a focus on proper waste management.
8. Rigorous evaluation of suppliers, selecting those meeting quality and environmental requirements specified by the organization.
9. Defining objectives and goals to improve service quality and pollution prevention, adopting integrated quality and environmental management planning and procedures.

Management commits to providing adequate resources to ensure that the Integrated Quality and Environmental System is understood, applied, and updated by all members of LiveSmart® Technologies SpA. The necessary means will be provided for the detection and resolution of any deviations that may occur in the system's operation, continuously improving its effectiveness.

The purpose of LiveSmart® Technologies SpA's Integrated Policy is to achieve maximum competitiveness in the Security sector and leadership in the services provided to customers
